What is REGATTA RC™?

A race management app for sailors, skippers, and race committees. Keep boats, crew, and results in one place — from a single race through the season. Built by people who race and run race committee. DRYA 2026 is live here.

How do I get started?

Create an account with your name, email, and a password, then tell us how you take part and confirm your profile, boat, and club. You can skip a step and finish later. A full walkthrough is on Getting Started in the Documentation library.

I think my club already put me in…

What do I do?

Sign in with the email they have on file. Check that your boat and memberships look right. If the app says you already have an account, use your original password — or reset it from the sign-in screen.

How does a club get all its sailors and boats in?

An administrator can import people and boats from a simple spreadsheet (CSV) — names, contact details, boat connections, and designs. That is how a large fleet, including DRYA, was loaded. After the import, each person still signs in and confirms their own record.

Is there a cost?

Racing and being scored are **free forever** — racers are never charged for race results. **Racing Tools** — Crew Messaging, Boat Compare, Rating Compare, Race Analysis, and Live Tracking — are $35 per year. $350 per year is for Rating Authorities, e.g. MWPHRF, to retrieve race results for determining handicap adjustments. Details are on the Pricing Cards document in this library.

See features and pricing on next page.

How do I get help?

In the app, open Support and send a message, or tap the Feedback button on any screen. You can let the team look at your account with you, then turn that off when you are done. The Support page also has the User Guide. If you need us another way, write to **support@mcode.com** .
